Lockable & Security Cash Box / Cassette

Controller Board acts as an interface between the host controller and the peripheral devices (banknote acceptor and dispenser so the host controller needs to talk with one controller board only.

The banknote acceptor of the CX-100 can accept banknotes from 5 to 500 Euros, as well as the most other global currencies. It has an option of either 500 or 1000-note lockable and removable cash box (2000-note box as future option)

The banknote dispenser has two to six lockable and removable cassettes with 500 or 1000-note capacity. It has an option of single note dispenser which pays out two banknotes per second, or a bulk-note dispenser which pays out up to 20 banknotes at a time. An optional security reject tray is also available to make all CX-100 cassettes / boxes lockable and removable, making the CX-100 an ideal solution for small banking applications.

The system has been designed for easy integration and flexible configuration at the lowest possible cost, and a driver file will be provided to reduce OEM integration expenses.
